

Social media/Viral section

The program this section takes place in is **Did you know?**, which is broadcasted in *Cadena Ser* from Monday to Friday (07.00-08.00 pm). I chose to produce this section because it's a light spirited one, good for this time of uncertainty, and because it fits the time. Also, I am really into social media and viral content, that is why I think I can give interesting and funny facts seen on Internet. Because of the quarantine, the program is done remotely so it will consist in one person only.

Script:

Yrene: Good afternoon everybody!

Sound effect: clapping fades in and out

I hope you all are doing well, but if you are dying of boredom, don't worry, I am your girl. As always I am here to show you the best of the Internet!

Sound effect: enthusiasm fades in and out

For example, what comes to your mind if you hear this?...

Music: song of the meme fades in

Music: song of the meme de-intensifies and then becomes background music

Exactly, is our favorite meme! Honestly, even if it is a bit dark, who doesn't love the guys with the coffin meme.

Background music fades out

But lately, the only thing everyone keeps talking about is the coronavirus...

Sound: sad expression fades in and out

Yrene: I know! It is not the funniest topic, but there is always a silver lining, and in this unique situation, it's the memes! Especially, the endless jokes about the quarantine. Martita de Graná has become a great phenomenon these days with her priceless narration of her confinement.

Clip: Martita de Graná fades in and out

With all of this free time, who hasn't acquire a new habit? The most common one is exercising, and that has been a good source of jokes, like the ones who talk about Patry Jordan's impossible and extravagant workouts:

Clip: Patry Jordan sonríe

So, I hope you guys have enjoyed this section and that it has helped you to disconnect a little of this hard situation. See you guys next week, stay safe and stay at home! And also... don't forget clapping!

Music: Resistiré fades in and out
